

PMP Table- and Graphic Manager

PMP Views on Demand

PMP TABLE- AND GRAPHIC MANAGER TGM

is a quantum jump considering the application comfort of the PMP-Software ! By means of the **TGM**, all PMP views can be filed directly so that they will be available immediately on demand.

In this manner, the **TGM** ideally supports the impressive presentation of the results. It organizes the management of all created views, so that the collected information can be reproduced immediately by pressing the corresponding button and refreshed in the desired form.

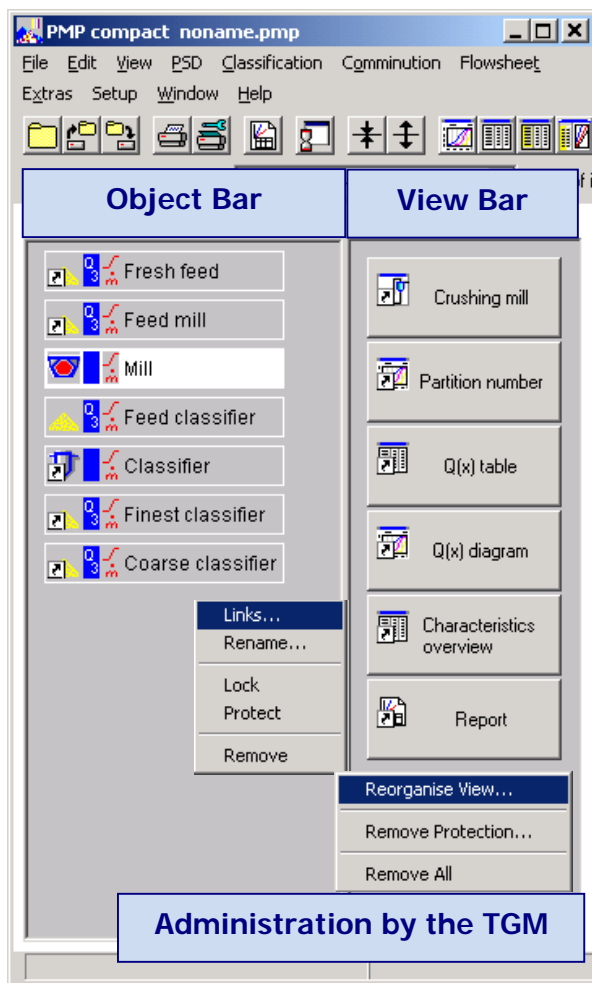

Fig. 1: PMP Table and Graphic Manager for administrating all views within a PMP project

For this purpose, each PMP view window offers the menu command „Create Link“ or an optional corresponding button in the toolbar, which enables the storage of each created view directly in the project. The range of the PMP view windows comprises

- ♦ display table
- ♦ edit table
- ♦ characteristic table
- ♦ characteristic list for the selected object
- ♦ characteristic overview for the entire project
- ♦ 2D/3D - graphic
- ♦ flowsheet view
- ♦ image window
- ♦ report view (page print preview)

TGM – The *properties* at a glance:

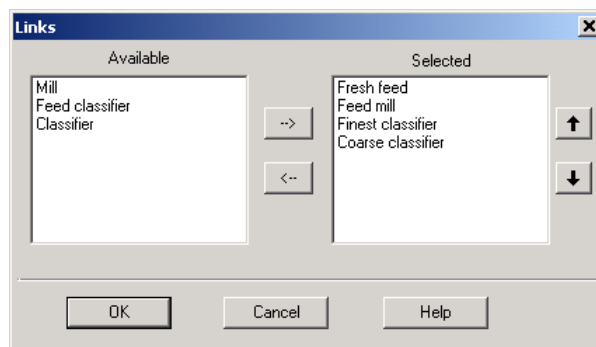

Fig 2: Dialogue for updating the PMP-Objects to be displayed

By means of the local menu on the current view area (see Fig. 1) the **TGM** enables

- Links... updating current links (see Fig. 2)
- Rename... equipping the view buttons with an individual name
- Lock... protecting the display format against accidental changes, but admitting the updates of displayed contents
- Protect... preventing all modifications on the filed view
- Remove... erasing all views which will be no longer needed
- Reorganise... changing the consecutive order of the view buttons if required

Each view is available for the direct print output. Furthermore, all views filed in the **TGM** can be arranged and formatted by means of the module

PMP REPORT GENERATOR

on a virtual print page. This technology enables designing impressive report pages.

APPLICATION BENEFITS

The practical advantage of the **TGM** is evident and cannot be estimated sufficiently high.

In particular, by means of this PMP module and under application of all other techniques and advantages offered by the PMP-Software (templates, report generator,...) the **TGM** enables

- ♦ the preparation of large information amounts of a PMP project, being well structured for a later display
- ♦ updating the PMP views with minimum expenditure of time.
